Search Distributor — Mobile Design README

Summary of the mobile / responsive UI work done on the home page, Find Distributors page, listing cards, ads and footer. All changes use Tailwind breakpoints: phone is the default, **sm** (640px+) and up keeps the original tablet/desktop layout.

Design principles

- **Shorter pages:** long vertical stacks become swipeable horizontal rows.
- **Clear hierarchy:** one main item large, secondary items smaller.
- **Peek of next card** (cards ~74–86% wide) so swiping is discoverable.
- **Tighter spacing** on phones; desktop spacing unchanged.
- **Short placeholders** so text is never cut off.

Changes by area

Area	Mobile behaviour	File
Home hero	Smaller headline, pill eyebrow, segmented tab bar, compact 40px search bar, Popular chips in one swipe row	client/src/pages/HomePage.tsx
Search bar	40px height, smaller text/icons, short placeholders, dropdown chevron	components/distributors/SearchPanel.tsx
Home sections	Removed "Explore Industries" and "How it works"; Business Showcase now above Latest Opportunities; smaller section padding	pages/HomePage.tsx
Business Showcase	Company and product cards are swipe carousels (76% width, snap); full-width "View all" button	components/home/Showcase.tsx, pages/ProductPages.tsx
Latest Opportunities	Swipe carousel (86% width)	pages/HomePage.tsx, components/leads/RequirementCard.tsx
Ads	Hero banner full width (2:1); two spotlight ads smaller swipeable cards (74% width)	components/ads/AdSlot.tsx
Distributor cards	Smaller padding/text, 2-line summary, specialty tags hidden	components/distributors/DistributorCard.tsx
Find Distributors header	Smaller headline (~28px) and intro, tighter spacing, swipeable Popular chips; shared with products/brands/leads	components/distributors/Hero.tsx, pages/DistributorsPage.tsx
Footer	Two-column link groups, brand on top, tighter spacing	components/layout/SiteFooter.tsx

Technical notes

- Carousel pattern: `flex snap-x snap-mandatory overflow-x-auto -mx-4 px-4` on phones; `sm:grid` restores the grid.
- Scroll containers need `relative`; otherwise off-screen `sr-only` text causes page-wide horizontal overflow (found and fixed).
- Home page height on a 375px phone dropped from about 9,200px to about 5,800px.
- Client typecheck passes. Visual check done in the browser pane for the home page only; other pages should be checked on a real device.

Not yet reviewed

- Mobile menu / header
- Home page bottom call-to-action band
- Profile, product detail, lead detail, pricing and admin pages
